

Pamela A Nicoara DDS MSD PLLC

PERIODONTOLOGY • IMPLANTOLOGY • ORAL MEDICINE

Dr. Nicoara completed her post-graduate training in Periodontics in 2006 from the University of Washington, and achieved Board Certification in 2007. She obtained her degree in dentistry in 2003 from Baylor College of Dentistry in Dallas. Dr. Nicoara has led and co-led Spear Study Clubs since 2010, and has lectured to local and state wide dental organizations. She publishes an informal newsletter for the dentists of Snohomish County each quarter since having opened her private practice in Everett in 2007. She enjoys all aspects of periodontics, but is particularly focused on esthetics as well as orthodontically and restoratively driven outcomes.

Her lecture will focus on periodontal surgical procedures that are intended to facilitate orthodontic results by reducing treatment times or enhancing orthodontic treatment. Therapies discussed will include PAOO and autotransplantation among other treatment options. Participants should be able to better recognize situations in which referral to an orthodontist or periodontist would be of significant benefit to the patient.
